

AS568 O-Ring Size Chart

The following tables list O-ring sizes in order of inside diameter. These sizes correspond to the **US Standard AS568**. Most of these sizes are readily available from Katon® tooling, specially designed for Perfluoroelastomer FFKM and other fluorinated materials developed for mass production toolings.

Standard Sizing and Tolerances

All O-ring sizes provided in this chart are made according to recognized international standards, such as ASTM, AS568, JIS, and others. These sizes are for customer reference and selection. However, for actual applications, it is important to rely on the official specifications and gland dimensions. The final selection should always align with the actual application requirements, ensuring proper fit and performance.

The list of available sizes is continuously being expanded. For sizes not listed, Katon® offers custom solutions tailored to meet your specific needs.

For sizes not indicated here, please contact the nearest Katon® representative for further assistance or to inquire about special size options.

Note: The AS O-ring Size Chart includes a column showing both the Nominal Size and the Actual Size. The nominal size was originally used to list the approximate fractional dimensions of the O-ring. Before the widespread use of dial calipers, people often referred to a 1-inch by 1-1/4-inch O-ring as a -214 O-ring. The fractional dimensions were also used as the gland size. Therefore, the nominal size is based on the gland size, not the O-ring size itself.

Important Notes:

- Sizing Confirmation:** The sizes listed are for reference and selection purposes only. Please ensure that the final O-ring selection meets the specific requirements of your application by verifying the gland dimensions and other relevant factors.
- Custom Solutions:** If the required size is not listed or if you have special sealing needs, Katon® offers custom O-ring solutions tailored to your unique specifications. Contact us for more information or to discuss your project.
- Quality Assurance:** All Katon® O-rings are produced with precision to international standards (ASTM, AS568, JIS, etc.) and undergo rigorous quality control processes to ensure they meet the highest performance and durability.
- Technical Support:** For assistance with material selection, product compatibility, or custom sizing, our engineering team is here to help. Please don't hesitate to reach out to your nearest Katon® representative.
